

Project Title: Mock End-to-End ICSR Processing & Regulatory Compliance Project

Role: Safety Associate

Dataset Size: 30 Cases

Narratives Prepared: 5 Representative Cases

NARRATIVES

1. Case ID: ICSR-M01

Case Classification: Serious - Recovering

Reporter Type: Healthcare Professional

Country: India

A 45-year-old male patient was reported by a healthcare professional from India. The patient was treated with diclofenac at a dose of 50 mg twice daily for pain. The duration of therapy was 5 days.

On 1-Jan-2025, the patient developed gastrointestinal haemorrhage. The event was considered serious; seriousness was due to hospitalisation. The suspect drug was withdrawn.

Concomitant medications reported included Pantoprazole. The patient's relevant medical history included history of gastritis.

The outcome was reported as recovering.

This case narrative has been prepared for academic training purpose only using a simulated dataset.

2. Case ID: ICSR-M17

Case Classification: Serious – Recovered

Reporter Type: Consumer

Country: India

A 46-year-old male patient was reported by a consumer from India. The patient was treated with glimepiride at a dose of 12 units subcutaneous for diabetes. The duration of therapy was 2 days.

On 1-Feb-2025, the patient developed hypoglycaemia. The event was considered serious; seriousness was due to hospitalisation. The suspect drug was withdrawn.

Concomitant medications reported included metformin. The patient's relevant medical history included diabetes mellitus.

The outcome was reported as recovering.

This case narrative has been prepared for academic training purpose only using a simulated dataset.

3. Case ID: ICSR-M05

Case Classification: Serious – Fatal

Reporter Type: Healthcare Professional

Country: UK

A 70-year-old male patient was reported by a healthcare professional from UK. The patient was treated with warferin at a dose of 75 mg once daily for thrombosis. The duration of therapy was 1 day.

On 11-Jan-2025, the patient developed intracranial haemorrhage. The event was considered serious; seriousness was due to death. The suspect drug was withdrawn.

Concomitant medications reported included aspirin. The patient's relevant medical history included hypertension.

The outcome was reported as fatal.

This case narrative has been prepared for academic training purpose only using a simulated dataset

4. Case ID: ICSR-M27

Case Classification: Non-Serious – Not reported

Reporter Type: Consumer

Country: India

A 41-year-old female patient was reported by a consumer from India. The patient was treated with levothyroxine at a dose of 20 mg once daily for hypothyroidism. The duration of therapy was 3 days.

On 15-Feb-2025, the patient developed palpitations. The event was considered non-serious. The suspect drug was dose reduced.

Concomitant medications reported none. The patient's relevant medical history included palpitations.

The outcome was reported as recovering.

This case narrative has been prepared for academic training purpose only using a simulated dataset.

5. Case ID: ICSR-M29

Case Classification: Non-Serious – Not reported

Reporter Type: Consumer

Country: India

A 26-year-old male patient was reported by a consumer from India. The patient was treated with oral contraceptive at a dose of 500 mg twice daily for contraceptions. The duration of therapy was 2 days.

On 18-Feb-2025, the patient developed nausea. The event was considered non-serious. The suspect drug was continued.

Concomitant medications reported none. The patient's relevant medical history included none.

The outcome was reported as recovered.

This case narrative has been prepared for academic training purpose only using a simulated dataset.
